

# Germany reports 14,211 new coronavirus cases, 786 deaths in latest update today

## The overall virus situation continues to abate in general

7-Tage-Inzidenz <b>80.7</b>	COVID-19-Fälle <b>+14,211</b>	COVID-19-Todesfälle <b>+786</b>	Aktive COVID-19-Fälle <b>~ -4,400</b>	COVID-19-Genesene <b>~ +17,800</b>
7-Tage-Fallzahl <b>67,122</b> von 67,122	Gesamt <b>2,252,001</b> von 2,252,001	Gesamt <b>59,742</b> von 59,742	Gesamt <b>~201,600</b> von ~201,600	Gesamt <b>~1,991,000</b> von ~1,991,000

New cases continue to level off at a lower plateau it seems, with active cases across the country now easing further to ~201,600 – the lowest since the start of November.

However, the death count remains a worrying statistic with total deaths now increasing to 59,742 persons as of the latest update today. The hope is that the trend will eventually fall off as the daily case count dips and hospitalizations drop moving forward.

The latter is still hardly seen as there were 4,264 (-58) virus patients requiring intensive care as of yesterday with there being 4,462 (17%) intensive care beds still available.
